

Job Summary

This is your opportunity to use your senior quality engineering skills to deliver advanced inhalation products that could have a positive impact on patients' lives around the world. Working alongside industry experts, you'll enjoy the chance to ensure the quality of a range of vital products and play a key role in the development of innovative medical solutions.

What you get

Our workplace culture encourages a diverse and inclusive work force. We offer flexible working opportunities that promote a healthy work life balance. We nurture our people through vocational & leadership development, mentoring programmes and career development.

In return for your skills and expertise, we offer a competitive base salary, annual bonus and generous benefits package including a pension plan, life assurance, private health, dental plan, share save/incentive schemes, cycle to work scheme and free parking.

What we are looking for

We're looking for a senior quality engineer with the proven ability to use the quality, complaints, design control, corrective and preventive action, risk management, and non-conforming product systems to extract and drive improvement initiatives.

With good knowledge of quality engineering tools such as AQQP, SPC and SCAR, you'll be supporting our supply chain and device industrialization teams to ensure devices are manufactured to all relevant industry standards and regulatory requirements. Highly experienced in leading internal and external audits is a necessary requirement.

You'll work closely with the production line to identify production trends, carry out audits and recommend quality standard updates ensuring all necessary controls are enforced to be compliant with ISO 13485 and FDA QSR requirements.

What you need

You'll have an engineering qualification diploma or degree or equivalent with previous experience of working in a product development environment utilising CMOs for manufacture and supply. You'll be able to demonstrate experience in supplier quality management: quality concepts/tools/methods (e. g. FMEA, IQ/OQ/PQ, MSA, etc.), quality issue resolution and quality monitoring measures.

You will possess strong communication, engagement and influencing skills with the proven ability to drive continuous quality improvements as well as excellent organisational skills, the ability to work flexibly, calmly and efficiently whilst responding to multiple priorities.

About Vectura

We are global leaders in the development of innovative formulations and devices for inhaled medical products and our specialist technologies helped over seven million patients in 2017. Working collaboratively, we combine technical, engineering, clinical and regulatory expertise

to design, develop, industrialise and deliver a unique range of innovative products, from smart nebuliser technologies to innovative formulations.

With a healthy pipeline of new products in development, as well as partnerships with major international pharma companies, it an exciting time to join, you'll find it's an ideal place to develop a stimulating and rewarding career.
